SUMMARY

Software engineering student at Metropolia University of Applied Sciences, **165 of 240 ECTS completed**, I also have **10 years' experience** in project management. Specialising in Software Engineering and building AI agent systems end to end. I design and ship LLM-driven applications: **multi-agent** workflow orchestration, retrieval and semantic vector search, multi-provider model routing, and the CI/CD and quality gates around them. My work is practical rather than theoretical — **7 public and 1 private projects, 3 hackathons**, and a graded machine learning foundation.

Seeking an **internship, trainee or junior position as an AI Engineer**, backend developer, or full-stack developer, where I can apply Python, Java and TypeScript to real LLM and data problems. I work in English and Mandarin, and study Finnish.

AWARDS

7th place at Junction Hackathon 2024, IFC Innovate: Enhancing Construction Experience Revolutionize Building Design with IFC
Built a team with Finnish participants to join Peikko's BIM challenge with zero prior experience in the domain. Over nearly 40 sleepless hours, overcame the learning curve and placed in the top 10 of nearly 200 submissions.
